# Brief introduction of your city as a stakeholder in ESPON-SPIMA

- On a metropolitan scale, concentration of jobs (75%) and population (68%) inside the Lyon Metropole's territory :
- This concentration questions the sustainability of the ongoing development scheme : mobility and transport infrastructures, social acceptability of urban intensification, urban sprawl and agriculture land use, energetic vulnerability of households...
- How making the territory's development more balanced ?
- Necessity of a wider political vision, shared by all the policy makers of the metropolitan area.

# Why your city needs a metropolitan planning approach (MPA)?

The boundaries of the urban planning tools and master plans don't fit with the reality of the FUA (Scot -> Métropole, SRADDET -> Region, DTA member state -> wider outlooks) and the cooperation bodies are not efficient enough.

Keys needs :

- Compare the different ongoing development schemes among the stakeholders cities in relation to the different types of territory
- Analyse good practices in urban planning and governance on a metropolitan scale (UFA) that could be transferred to the metropolitan area of Lyon.
- Promote cooperation between local authorities and overall governance practices

# Which key actors will benefit most from a metropolitan planning approach?

- Policy makers of the neighbouring local authorities (mainly municipalities) of the Métropole de Lyon
- Decision makers of the main urban districts of the Lyon metropolitan area
- Regional authorities, considering that they now are in responsibility for the SRADDET that aims to promote an overall governance at the regional scale on the urban planning issues

*=> In order to promote a strategic vision about the development of the territory, shared by all the policy makers at the different governance levels & between the different governance levels (local <—> member state / local – local - regional).*
